

## 9. Online Security Management System

Aim: To create a UML Class Diagram for an Online Security Management System that schedules security personnel and calculates payments.

Procedure:

1. Identify entities: Security Person, Duty Schedule, Leave Management, Payroll System.
2. Define attributes and operations for each entity.
3. Establish relationships and depict interactions.
4. Verify and refine the diagram.

Diagram:

Result:

A UML Class Diagram demonstrating security management operations.
